

Makoha x Pharmacy 777

Non-Exclusive Consultation Assurance Design Partnership

6 WEEKS

AUD \$0 FEE

SYNTHETIC ONLY

NON-EXCLUSIVE

THE OPPORTUNITY

As prescribing-pharmacist services expand, pharmacy groups need consistent evidence that consultations follow approved eligibility, exclusion, escalation, communication and documentation requirements - without weakening pharmacist judgement or duplicating mandated clinical systems. Makoha is developing a governance-first consultation-assurance platform for authorised health professionals.

WHAT WE WILL DO

- Map the current prescribing-pharmacist workflow and governance responsibilities.
- Identify material gaps and duplication against current clinical systems.
- Demonstrate the proposed assurance workflow using synthetic cases only.
- Tabletop safety, accountability, privacy, security, integration and usability risks.
- Deliver a findings report and governed next-stage evidence protocol - or recommend stopping.

WHAT WE NEED

- One accountable Pharmacy 777 group sponsor.
- One clinical-governance or service leader.
- One Toowoomba prescribing pharmacist.
- One technology or workflow owner.
- Up to four structured workshops and factual review of the workflow map.

No patient data, production credentials or clinical deployment are requested.

COMMERCIAL TERMS

- Six-week discovery and synthetic-evidence phase; each party bears its own internal costs.
- No minimum term, rollout commitment or automatic paid conversion.
- Either party may stop, including immediately for safety, privacy, security, professional or regulatory concerns.
- Any later evidence phase is separately scoped, approved and priced.

SAFEGUARDS

- Pharmacists retain clinical judgement and professional accountability.
- No claim of regulatory approval, clinical validation or patient readiness.
- No patient-identifiable information or model training on Pharmacy 777 data.
- Existing intellectual property and confidential information remain with their owner.
- Exact Toowoomba contracting parties are TBC and must be confirmed before execution, data access or site activity.

THE SIX-WEEK DECISION

Proceed only if Pharmacy 777 confirms a material problem, Makoha demonstrates a useful non-duplicative role, critical risks are bounded and an authorised sponsor approves a next step. Otherwise, revise or stop.

PROPOSED FIRST CONVERSATION

A 45-minute discussion with Pharmacy 777's clinical-governance and technology leaders to test fit, confirm participants and agree the discovery boundary.

Non-binding discussion document. Not legal, clinical or regulatory advice.
